

Corporate Agriculture Capability Statement

Introduction

We facilitate all forms of agricultural consultation with a focus on the future sustainability of the industry and assisting individuals, businesses, and companies through the process of regenerative sustainability and carbon goals.

WolfenWeier Consulting is a unique company specialising in assisting businesses to understand and implement suitable policies and practices around the new environmental legislation affecting every business in Australia. With one clear objective: it has to suit your business model.

All businesses in Australia must have a net zero strategy, only a small percentage have the ability to have a carbon production strategy, by producing credits as a new commodity. This will flow up and down their supply chains.

We help set and align sustainability goals with on the ground management strategies. Ensuring that your goals are achievable within the governmental frameworks moving towards carbon neutrality #2050.

From assessment and planning to demand and supply, we work with your team to manage every stage of this emerging industry.

About us

We are a wholly Australian owned business focused on Australian landowners and businesses, with the aim to have the greatest positive effect on the environment in our lifetimes.

Australians supporting each other and our environment.

Operating Australia wide for Investors, Project managers, Agribusiness and other Businesses through the entire supply chain to the consumer level.

We base out of Brisbane, Toowoomba and Goondiwindi. Boots in the field or bums in your office.

Core values and Vision

Being business owners first and foremost, therefore we put clients core business first.

What sets us apart from others is our strong links to Australian Agriculture.

We understand soils, crops, livestock, and the people who own, run and work in the business.

Our passion derives from direct involvement with legislation when it began to filter into the industry 20 years ago, with the advent of the Kyoto protocol and subsequent legislative changes enforced. This led to our involvement in the emergence of the current, more “farmer friendly” legislation. Creating economic, social and environmental benefit.

Our mandate is: To insulate any business from negative effects and help them obtain any benefits.

“Being one of the largest carbon sinks known, agricultural soils, regardless of your practices, your agricultural pursuits do sequester some level of carbon. Why not benefit from a commodity you are already producing. Whether your goal is to come into line with carbon neutral legislation, or profit from the exercise, we facilitate your involvement in every aspect.”

Products and services provided.

We work with your existing team from Board, CEO to on the ground decision makers, sustainability officers and managers, within businesses and supply chains to provide them with a conclusive way forward to ensure that their goals are met by providing them with actual management planning and practical outcomes. (*see full listing attached)

Why work with us?

We understand your business as we are farmers, manufacturers, and retailers ourselves. We are focused on positive, achievable goals for our clients while working within their existing management strategy and core business. To facilitate the journey towards practices in line with legislative requirements.

We handle the hard parts to protect your core business from negative effect.

Once engaged, we are a part of your team. Working for you.

Our Services

We offer a range of consulting packages and services, encompassing all levels of understanding and current involvement. We tailor to individual clients requirements through consultation with the team.

Passionate about the future productivity and sustainability in regenerative agricultural systems

Business development

Our company has extensive experience in developing and implementing successful agriculture and carbon management initiatives. We have a deep understanding of the market and industry trends, and we are well equipped to help our clients grow their businesses.

Acquisitions:

Our team has a proven track record of managing complex acquisitions, including those in the agriculture and carbon management sectors. We work closely with our clients to understand their goals and objectives, and we use our expertise to help them identify and secure the best opportunities for growth.

Land Evaluation for Carbon Projects:

Our company has extensive experience in conducting land evaluations for carbon projects. Our team uses cutting-edge tools and techniques to assess the potential for carbon sequestration and to identify the best locations for carbon projects.

Agricultural Enterprises:

We are experienced in working with a wide range of agricultural enterprises, including large-scale commercial farms, small-scale family farms, and everything in between. Our team is dedicated to helping our clients maximize their profitability and sustainability, and we work closely with them to develop customized solutions that meet their specific needs and goals.

- Market analysis and research
- Strategic planning and implementation
- Network building and relationship management
- Business proposal development and presentations
- Sales and business growth strategies
- Partnership and collaboration development
- Stakeholder engagement and management
- Project management and execution
- Budget and financial management
- Negotiations and contract development
- Market intelligence and trends analysis
- Business strategy and market development
- Relationship building with government agencies and stakeholders.
- Agricultural and carbon market analysis.

Natural Capital Asset and Farm Management

Conduct a comprehensive analysis of the Whole-System Natural Capital Assets under Management. This comprehensive examination examines all aspects of the assets, yielding a detailed understanding of the current management status and specific areas that require improvement.

- Understanding of natural capital and its role in sustainable agriculture and land management.
- Knowledge of ecosystem services and their impact on farm productivity and profitability.
- Familiarity with agroecology principles and regenerative agriculture practices.
- Ability to assess and monitor the health of soil, water, and other natural resources on a farm.
- Knowledge of sustainable crop management practices and integrated pest management strategies.
- Familiarity with grazing management practices, including rotational grazing and pasture management.
- Experience in developing and implementing conservation plans for the protection of soil, water, and other natural resources.
- Knowledge of sustainable energy systems and alternative energy sources for farming operations.
- Ability to manage and maintain infrastructure, such as irrigation systems and farm roads, to minimize their impact on natural resources.
- Knowledge of sustainable procurement practices, including the sourcing of inputs and the management of waste.
- Strong project management skills, including budgeting, scheduling, risk management, and resource allocation.
- Familiarity with relevant regulations and standards, such as the Natural Capital Protocol and the Farm Sustainability Assessment.

Carbon Project Management

We collaborate with landowners, land managers, and native title holders to unlock the full potential of their land for carbon sequestration. Our goal is to help our clients achieve their sustainability objectives by providing expert guidance and support throughout the carbon project journey.

- Ability to monitor and report on the progress of carbon management initiatives.
- Strong stakeholder engagement and communication skills.
- Ability to conduct life cycle assessments and determine carbon impact of products and services.
- Knowledge of renewable energy and energy efficiency technologies.
- Familiarity with carbon offsetting and trading systems.
- Experience in working with cross-functional teams and managing interdepartmental projects.
- Knowledge of data management and analysis tools for tracking and reporting carbon emissions.
- Ability to identify and assess potential carbon reduction opportunities and develop strategies to realize them.
- Understanding of the role of sustainable procurement in reducing carbon footprint.
- Familiarity with sustainability reporting and disclosure frameworks such as the Global Reporting Initiative.
- Strong project management skills, including budgeting, scheduling, risk management, and resource allocation.

Project Management

Experienced in project management, our team delivers successful projects with high-quality results, on time and within budget. Our proven track record includes delivering complex projects and effectively managing stakeholder relationships to align with business objectives.

- Comprehensive Project Management: Ability to plan, execute, monitor, and close projects effectively, ensuring successful delivery and alignment with business objectives.
- Stakeholder Management: Skilled in managing relationships with stakeholders, including internal and external stakeholders, to ensure project success.
- Risk Management: Ability to identify and mitigate project risks, ensuring project success and reducing the potential for project failure.
- Budget Management: Proficient in developing and managing project budgets, ensuring that project costs are effectively controlled and monitored.
- Schedule Management: Ability to create and manage project schedules, ensuring that projects are delivered on time and within budget.
- Resource Management: Skilled in managing project resources, including human resources, to ensure project success.
- Change Management: Ability to manage and implement changes to projects, ensuring that project objectives are met and project outcomes are successful.
- Quality Management: Skilled in developing and implementing quality management processes, ensuring that project deliverables meet quality standards.
- Communication Management: Ability to effectively communicate project information to stakeholders, including status updates, project progress, and any issues or risks.
- Continuous Improvement: Dedication to continuous improvement and learning, ensuring that project management processes and methodologies are always up-to-date and effective.

#2030 Net Zero Strategy

Our approach is based on a comprehensive understanding of the unique challenges and opportunities faced by the agricultural sector, and we work closely with clients to identify the most effective and sustainable solutions.

We support agricultural businesses in adopting climate-smart practices, such as reducing tillage, improving soil health, and increasing the use of renewable energy. We provide practical advice and guidance to help clients achieve their sustainability goals.

- Comprehensive Integrated Climate Action Strategy
- Business Development Planning towards the 2030 Agenda
- Alignment of Sustainability Policy with Net Zero Action Plans
- Strategic Environmental Sustainability Goal (ESG) Planning
- Accurate Carbon Emission and Footprint Calculation, including Greenhouse Gas (GHG) Scopes 1-3 Accounting
- Expert Supply Chain Liaison and Collaboration
- Professional Supply Chain Carbon Consulting Services
- Innovative Supply Chain Circular Carbon Economy Strategies

Passionate about the future productivity and sustainability in regenerative agricultural systems

In all of our business development initiatives, our focus is on delivering high-quality results that exceed our clients' expectations. Whether you are looking to grow your agriculture business, manage your carbon footprint, or develop new carbon projects, our team is here to help.
